

# Get into LEARN 2 EARN (L2E)!

## What?

Interactive in-class presentations made by Vermont business professionals that engage students in 21<sup>st</sup> century skills used in today's careers.

## How?

L2E Coordinators train business teams to involve groups of students (usually at 9<sup>th</sup> grade level) in an activity that demonstrates a task/problem that they face on a day-to-day basis. L2E can be a part of a career day or an individual class but it must be integrated into the school's career planning curriculum.

## Why?

Students need to make the connection between academics and the working world! They need to know what skills are necessary to succeed, learn how they are applied, and be exposed to the variety of jobs that exist in VT.

## What are some examples?

Building & Zoning Activity - Students work in groups to design a building site plan. They are given city zoning requirements, permit application, and a cost estimate worksheet to complete.

Creating an Efficient Production Line - As a class, students are set up in a production line by presenters and must collect Skittles in baggies by given instructions. They are then charged with creating a more efficient production line by changing work station design.

Website Design - Students are provided with sheets of paper, crayons and a list of ideas for web site creation. "Student Designers" are to brainstorm about the design, layout and content of their site and do a mock home page.
